Market Outlook – July 2024

Indian benchmark indices continued its upward march, recording new highs as institutional buying reached an all-time high. The month was characterized by the Union Budget announcement, which came with a barrage of reforms, including but not limited to, tax incentives for startups, increased spending on infrastructure, particularly rural infrastructure, and incentives for MSMEs. The reduced tax rate for new manufacturing companies along with the simplified corporate tax compliance is likely to incentivize string growth in the manufacturing sector. This signals the governments continued focus on driving economic growth, attracting further investments by strengthening India's potential to be a developed economy and its agenda for modernizing the Indian rural population. This investment will spur stronger economic growth and further enable the rural population to increase expenditure. The government has also cut down its target for the fiscal deficit to 4.5% and has reduced customs duty to 6%, signaling a growth and formalization of the gold imports to the country. These strong reforms and measures to streamline regulatory process and reduce compliance burdens for businesses are expected to improve the ease of doing business in India.

FPIs made a U-turn, demonstrating a remarkable shift in FPI sentiment, and infused \$3.18 Bn into Indian equities in Jun'24 and followed it up with an even more substantial \$3.87 Bn in Jul'24. The political stability post-elections and the return of the NDA government played a pivotal role. Additionally, the normalization of the VIX (volatility index) after its uncomfortable highs in May'24 contributed to this positive trend.

DII's remaining as net buyers for the 12th consecutive month with \$3.4 Bn inflow in the Jul'24 and mutual funds driving an inflow of +\$1.2 Bn signals confidence by the domestic players in the economy. India's FX Reserves came in at \$671 Bn, reaching its peak, while Composite PMI rose to 60.9 in Jun'24 (60.5 in May'24) and May'24's industrial production was +5.9% YoY (+5.0% in Apr'24). Jun'24 CPI print eased at +5.08% YoY (+4.75% in May'24) while WPI picked up to +3.4% YoY (+2.6% in May'24).

The IT sector has emerged as the top performer giving a 13.14% return, largely driven by the strengthening of dollar and was closely followed by the Pharma sector at return of 10.61%, FMCG at 9.45% and Oil and Gas at 8.47%. India has experienced strong Monsoon rains the past month, and picks up to a surplus of 3%, with Southern and Central India faring much better than the other regions. This signals a strong output from crops and will in turn help increase spending of the rural and agrarian populations strengthening the performance of Consumer Staple and Consumer Discretionary sectors.

The Indian financial market experienced robust performance in Jul'24, driven by strong sectoral returns and significant FPI inflows. The political stability post-elections and positive economic indicators played crucial roles in attracting foreign investments. The IT sector's dominance highlights the market's sensitivity to global currency movements. Overall, the market outlook remains positive, with continued reforms and economic growth expected to sustain investor confidence.

The Fund is not a guaranteed or assured return fund.

Indian equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.

The use of derivatives by the Fund affects the volatility of the Fund and exposes it to the risk of loss due to the unexpected application of a law or regulation or because contracts are not legally enforceable or documented correctly.

The Morningstar Rating TM for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period has the greatest impact because it is included in all three rating periods.

Lipper Leaders for Total Return may be the best fit for investors who want the best historical return, without looking at risk. This measure alone may not be suitable for investors who want to avoid downside risk. For more risk-averse investors, Total Return ratings can be used with Preservation and/or Consistent Return ratings to make an appropriate selection that balances the risk and return. The funds in each index receive scores for each metric in each time period. The bottom 20% of funds receive a "1," the second quintile receives a "2," the third a "3," the fourth a "4," and the fifth quintile receives a "5." The top 20% of funds, those ranked "5," earn the "Lipper Leaders" designation.
